

Lofi-Phone Manual

Hello and thank you for supporting Magpie Pedals by getting this super old school microphone!
It works on a single 9V battery (not included) that you simply attach inside through the hole in the bottom.

The Lofi-Phone is a vintage Swedish telephone repurposed into a microphone with active volume boost and a 6,3mm (1/4") mono jack.

Controls:

Button: ON/OFF (with LED indicator).

Knob: Volume (from silent to boosted).

When turning on your Lofi-Phone it can give off a pretty loud pop noise. So my tip is to simply turn the knob fully counterclockwise (silent) to get rid of that when turning it on.
