

# Pocket Drone Manual

Thank you for supporting Magpie Pedals and getting yourself one of my drone synthesizers!

It works on a single 9V battery (not included) or 9VDC  - center negative.

## Controls

**Button:** ON/OFF with LED indicator.

**Pots:** The Pocket Drone has 12 oscillator pitch pots divided into 4 banks (from left to right) with individual volume pots. So 3 oscillators per volume. The banks are then grouped into 1+2/3+4 on the output.

**Output:** The output is a 6.3mm (1/4" for US people) stereo jack. Where the first two banks go to the tip and the second two banks go to the ring of the output. For panoration optimization and experimentation!
